
Countertop washbasin collection by Prospero Rasulo for Valdama

April 9th, 2016 by retail design blog

Cut is a countertop washbasin inspired by the idea that less is more, with streamlined lines and edge-cut profiles. This sculptural washbasin is obtained by juxtaposing two complementary and finished shapes: the recessed basin and the raised supported surface. The two elements, contained in the ideal frame, are fused together in a delicate balance between solid and hollow. The external frame highlights the internal layout, making the washbasin a key item in the bathroom. Cut's modular layout, with three available sizes and two versions with or without countertop, is also available in different colour versions

Pod is a countertop washbasin characterized by organic forms inspired by nature. It's a shell designed to receive water – an agile, independent and versatile element – while reflecting the comfort and wellness of this element. A sophisticated project, developing different curves which give origin to four shapes that can be reduced to simple geometry: circle, square, rectangle, oval. The wide range of sizes meets all aesthetic and functional needs.

Track is a countertop washbasin, inspired by Valdama's aesthetical and technical studies on shape modelling and profile streamlining. It's characterized by a defined shape, a simple and absolute geometry, which welcomes the soft materiality of ceramics. Track is an ideal frame, designed to welcome the ever-changing water experience and to give a shape to its fluidity, taking on the independence of an art object. Track is available in three different sizes and in different colours with matte or glossy finish.

All of them is designed by Prospero Rasulo for [Valdama](http://www.valdama.it/) [<http://www.valdama.it/>]
